CHAPTER 12

Dorsal Anterior Midcingulate Cortex: Roles in Normal Cognition and Disruption in Attention-Deficit/Hyperactivity Disorder

George Bush

Chapter contents

Goals of This Chapter 246
The Emergence of Cognitive Theories for “Limbic” Cortex 247
Localizing daMCC and Clarifying Terminology 248
Mechanistic Theories and Observations of daMCC Functions 251
    Monkey Electrophysiology Studies 251
Main Observations and Models of daMCC Functions 254
    Emotion 254
    Error Detection 254
    Anticipation/Timing/Expectancy 255
    Novelty Detection 255
    Selection for Action: Attention, Target Selection, and Response Selection 255
    Working Memory 256
    Difficulty Monitoring 256
    Competition/Performance Monitoring 256
    Prediction Error/Error Likelihood 257
    Autonomic Control 258
    Feedback-Mediated Decision-Making 258
    Nociception/Pain 261
Dysfunction in daMCC in Attention-Deficit/Hyperactivity Disorder 262
    Evidence of daMCC dysfunction 262
Further Connections of Cingulate Research to ADHD 265
    Neurobiological Views of daMCC and ADHD 267
Acknowledgements 268
References 268
