CHAPTER 14

Cingulate Nociceptive Circuitry and Roles in Pain Processing: The Cingulate Premotor Pain Model

Brent A. Vogt and Robert W. Sikes

Chapter contents

The Medial Pain and Limbic Systems Converge in the Cingulate Gyrus 312

Goals of This Chapter 313

Human Cingulate Nociceptive Responses 314

Nociceptive Intensity Coding and Innocuous Stimulus Driving 315

Pathways for innocuous cutaneous and visceral information 316

Emotion and Pain Linkages 317

pACC 317

aMCC and Fear 318

Pain and emotion linkages 319

Nociceptive Properties of Anterior Cingulate Neurons 320

Three Sources of Nociceptive Driving of Thalamo Cingulate Projection Nuclei 322

MITN nociceptive properties 322

Spinothalamic tract MITN terminations 324

Subnucleus reticularis dorsalis projections to MITN 325

Parabrachial projections to MITN 326

Cortical MITN Projections 326

pMCC and dPCC: Nociceptive Sensorimotor Orientation of the Body 327

Nociceptive activation of pMCC and dPCC 328

MITN input to PCC 328

Cingulate Premotor Areas in Nociception 329

Nociceptive activation of the cingulate premotor areas 329

Role of the parafascicular nucleus in nocifensive behaviors 329

MITN projections to cingulate premotor areas 329

Gyral and sulcal cortex interactions 330

MITN Connections Synchronize Medial-Limbic Pain System Participants 330

MITN and CPMA Projections to the Striatum: Another Perspective on Nocifensive Behaviors 330

The Cingulate Premotor Pain Model 331

The Limbic Medial Pain Neuromatrix: The Next Generation 333
