Mild Cognitive Impairment: Pivotal Cingulate Damage in Amnestic and Dysexecutive Subgroups

Julene K. Johnson, Elizabeth Head, and Brent A. Vogt

Chapter contents

Goals of This Chapter 728
History of the MCI Concept 729
Clinical Characteristics of MCI 729
Differential Diagnosis of MCI 730
Clinical Outcomes of MCI 730
Imaging Cingulate Cortex in Amnestic MCI 731
Neuropathology of Amnestic MCI 732
Dysexecutive MCI and AD: Posterior Cingulate Damage and Visuoconstructional Deficit 732
Neuropathology in Dysexecutive MCI 733
Executive Impairment in an MCI Case: The ‘Frontal’ Variant 733
Frontal and temporal pathology 734
Cingulate neurofibrillary damage: The ‘posterior cingulate’ variant 735
Cingulate Aβ peptides and ‘non-overlap’ with neurofibrillary degeneration 736
Cingulate neurodegeneration 737
MCI in MCI: Early Conformation of Tau in Primary and Secondary Foci 739
Cell-Cycle Reentry Mechanism of Neurodegeneration 739
Primary Cingulate Focus and Its Progression in the Context of Prodromal AD 740
Visuoconstructional Deficit: Key Symptom in Dysexecutive MCI Associated with dPCC Damage 742
Acknowledgments 742
