BLUES MUSIC!
TAKES THE BLUES
AWAY

Greetings everyone! and welcome back to another edition of Gear Up! With me! Your humble guide and companion, K.K.Martin.

Last week we covered some of the terminology and gear used to achieve the overdriven tone you're looking for and decided to check out some of the thousands of pedals (with literally hundreds more every day!) available to us.

One type of overdrive that we haven't mentioned yet is Boost.

Boost does what the name implies. It boosts your signal overall going to the front of the amp, causing the amp to overdrive. Another trick is using the volume on an eq pedal and or pushing frequencies up into overdrive.

The Tried and true champs of overdrive! "The Ibanez TS-808 or 9 Tube Screamer" or "The Boss BD-2 Blues Driver" are perennial favorites and on more pedalboards than just about any other drive pedals out there! And an excellent place to start if you're looking for an excellent fundamental blues-rock tone! There are hundreds of pedals based on these two circuits! These are good choices for placement earlier in the signal chain. When it comes to drive stacking, I prefer to have my most extreme pedal at the end of the signal chain going towards the amp.

You will hear the term "Transparent" used sometimes to describe overdrive. Basically, what that means is no frequencies or color are added to the tonal character of your guitar and amp; it just adds more umph!

A Tube screamer is NOT what you would refer to as a Transparent drive. It has a mid-frequency bump that helps it jump out in the mix, and many players (including Stevie Ray Vaughan) find it appealing! The Blues Driver is very similar but with less of the mid bump. If it all possible, you should give both of these guys a try!!

Moving on to more distorted and overdriven, I have always found the Ratt pedal to be extremely flexible, going from a chunky drive to almost fuzz-like distortion! Boss again with the OD-1 is also a good choice

when looking for more umph and stacks well!

One of the desired characteristics of a good drive pedal is how well it works in conjunction with the guitar's volume and tone control. Sometimes turning the guitar down can produce lovely clean sounds when using a drive!

There are 2 in one pedals offering two stages of drive and or Boost! Again the selection of pedals and possible combinations is a glorious puzzle few of us ever stop chasing!

Next week I will single out some more specialty and boutique solutions on our quest for drive nirvana! We will be looking at Tube pedals, as in pedals that utilize tubes as a component and dual-drive!

If you have comments or would like me to discuss a particular piece of gear please click the picture and send your comments, questions, and suggestions to me. We will post your comments on upcoming episodes. Thanks and be good to one another.

Got Blues? Radio, that is... We do and we'd love to Share
